Hi, welcome to stoppybus

The game needs to be run directly from the python file at present.
In the stoppybus_code folder there is a virtual environment called game. You will need to activate the game environment to be able to run the game. After downloading the stoppybus_code folder the steps to run the game are as follows.

1) Open the terminal
2) Use the  cd command to navigate to the stoppybus_code folder.
3) Then run source game/bin/activate to enable the game virtual environment
4) Then run python stoppybus.py and the game should open.

Then sit back and enjoy the ride...
